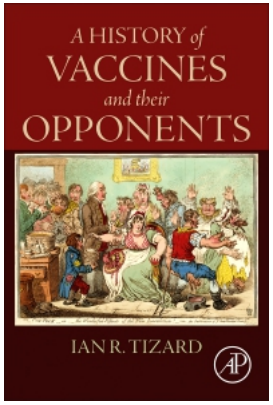
1.4 million people identified as trangender and gender diverse (TGD). Approximately 25 million people identify as trangender worldwide, with 1 million in the US. Gender dystopia often motivates trangenders to seek gender-affirming procedures. The Mount Sinai Center for Transgender Medicine and Surgery in New York City was established in 2016. Its mission is the consolidation of care for TGD patients within its hospital system and modeling of structure for a center of excellence for TGD health. There are more such centers worldwide. This book explores the different types of gender affirmation surgeries, serving as a practical guide to the the top and bottom surgeries, such as various approaches to vaginoplasty, facial feminization, mastectomy, techniques in phalloplasty, metoidioplasty, and the complications management. It included the recent surgical updates and could be useful for individuals interested in gender affirmation surgery and its refining techniques. https://shop.elsevier.com/books/atlas-of-operative-techniques-in-gender-affirmation-surgery/purohit/978-0-323-98377-8/ < https://shop.elsevier.com/books/atlas-of-operative-techniques-in-gender-affirmation-surgery/purohit/978-0-323-98377-8/> .



[A History pf Vaccines and Their Opponents < https://shop.elsevier.com/books/a-history-of-vaccines-and-their-opponents/tizard/978-0-443-13434-0>](https://shop.elsevier.com/books/a-history-of-vaccines-and-their-opponents/tizard/978-0-443-13434-0)by Ian R. Tizard published by AP (Elsevier) in 2023. In 1806, a new journal, The Medical Observer was published. It took the anti-vaccination stand. By 1808, it was NOT that there was an increase in the numbers of smallpox cases occurring in vaccinated people. This fact reflected a total lack of standardization and quality control of vaccine itself. However, the anti-vaccinationists were usually acting as independent individuals, they were not organized. And this is why they had a very limited impact on a growing consensus that vaccination worked and was safe and effective. In the meanwhile vaccination had many defenders, who were pointing out that the anti-vaccine theories were nonsense. This is a book about a 300-year war, exploring the mandatory smallpox vaccination, voluntary vaccination, new vaccine mandates, the Charlbury anti-vaccination riots, the vaccine rebellion in Brazil in 1904, Coronavirus vaccine protests, Polio, Measles, and Covid vaccine mandates, Military mandates, much more. The author of this book sounds very positive about vaccination, suggesting that it

prevents disease transmission. He uses such argument that because “of vaccination… the smallpox virus has been eradicated from the globe.” However, he did not mention that the Coronavirus was not even isolated and that the Covid injections are the gene-modifying injections, called “vaccines.” https://shop.elsevier.com/books/a-history-of-vaccines-and-their-opponents/tizard/978-0-443-13434-0/ < https://shop.elsevier.com/books/a-history-of-vaccines-and-their-opponents/tizard/978-0-443-13434-0/> .
